Education

Bachelor of Technology (Computer Science)	2023 – 2027
Newton School of Technology, Rishihood University	Grade: 8.07 / 10.0
Intermediate (Class XII)	2021 – 2022
The Chintels School	Grade: 67.66%
Matriculation (Class X)	2019 – 2020
The Chintels School	Grade: 84.16%

Experience

Allen Digital	Jan 2025 – Jul 2025
<i>SDET Intern</i>	<i>Bengaluru, India</i>
- Built and scaled UI and API automation frameworks using Playwright, TypeScript, and YAML, increasing test coverage and reducing flaky test failures by 30–35%. - Productionized an AI-driven test failure analysis system by deploying an AWS Lambda + SQS pipeline to process test reports and store structured logs in MongoDB, reducing debugging time by 50% and enabling faster root cause analysis. - Automated test data setup and database workflows using SQL and Python scripts, eliminating manual effort and ensuring consistent test environments. - Owned on-call test infrastructure, analyzed failures, and managed issues via JIRA, accelerating bug triaging and improving coordination between QA and development teams. - Contributed 8–10 PRs per week, fixing automation issues and improving overall code quality and test stability.	

Projects

VaultBridge (Demo) (GitHub)
Tech Stack: React, TypeScript, Node.js, Express, PostgreSQL, Prisma ORM, Docker - Developed VaultBridge, a secure web application enabling seamless server-side file transfers across Google Drive, Gmail Attachments, and Google Cloud Storage. - Implemented secure Google OAuth 2.0 authentication for linking source and destination accounts without exposing credentials. - Built a server-side file streaming engine for direct account-to-account data migration with automated retry mechanisms using cron jobs. - Implemented AES-256 encryption for secure storage of OAuth refresh tokens and sensitive credentials at rest.
EduChain (GitHub)
Tech Stack: Node.js, Express.js, REST API, libp2p, Docker Compose, SHA-256, ECDSA - Developed EduChain, a decentralized peer-to-peer academic credential verification system enabling universities to issue cryptographically signed certificates. - Implemented ECDSA digital signature generation and SHA-256 hashing for tamper-proof PDF certificate issuance and verification. - Built decentralized ledger storage across 13 Docker-based nodes (university, employer, and relay) with fault-tolerant replication using libp2p networking. - Exposed a REST API (/issue, /verify, /stats) and built a real-time network visualization dashboard showing live node status.

Technical Skills

Languages & Frameworks: TypeScript, JavaScript, Java, React.js, Node.js, Express.js, Tailwind CSS
Databases & Cloud: Kubernetes, PostgreSQL, MySQL, MongoDB, AWS, Firebase, Supabase
Tools & Platforms: Docker, Terraform, Git, GitHub Actions, Playwright

Extra-Curricular Activities

- Contributed to open source: merged 2 pull requests in WikiEduDashboard, going through full code review and CI/CD workflow.
